OCFP Statement on Government of Ontario's Announcement of Expanded Rollout of COVID-19 Vaccine

The OCFP is encouraged by the Government of Ontario's announcement today to expand the COVID-19 vaccine rollout. However, we know that many options beyond pharmacy and mass vaccination sites will be needed to ensure vaccination efforts reach all Ontarians, especially those who are vulnerable, hesitant, and homebound. This is why Ontario's plan must include a central role for family doctors.

With vaccine supply increasing it is imperative that we have more options for all Ontarians to be vaccinated; this means using the full potential of family physicians to ensure an efficient and equitable rollout. Thousands of family doctors are ready to get to work vaccinating Ontarians. The OCFP is eager to hear more from the government on how family doctors will help further expand the rollout.
