
PRACTICAL LEARNING * PROFESSIONAL DEVELOPMENT * CLINICAL LEADERSHIP

You face many different presentations of musculoskeletal conditions in your practice. Build on your diagnostic skills, as this workshop takes a systematic, hands-on approach to bring the latest examination diagnostic assessment skills to you.

Join **Dr. Michelle Acorn and workshop developer and family physician Dr. Janice Harvey**, both with extensive experience in sports and exercise medicine, to learn how the most current techniques to diagnose **joint injuries** and **manage MSK conditions**.

> Why attend?

In this *hands-on, full-day* workshop:

- **Get practical tips** on applying patient-centred interviewing skills to acquire information needed to understand the mechanism involved in the injury
- **Expand your skills** in identifying the mechanisms that underlie common injuries of the major joints of the body through an organized physical exam
- Use **best evidence** to evaluate the results of specific physical tests so that you can design the optimal management plan, including timely recovery
- **Support your** patients and their families in making informed decisions about managing their health, including common musculoskeletal conditions
- **Practice current examination techniques** on your peers and **get immediate guidance** from experienced instructors
