

PRACTICAL LEARNING * PROFESSIONAL DEVELOPMENT * CLINICAL LEADERSHIP

Children and adolescents pose challenges of their own in clinical practice and it is common to face unpredictable issues from your young patients on any given day.

The Pediatric Preventive Care program provides current guidelines, best-evidence recommendations, and practical strategies for caring for children and youth. The program builds on the Greig Health Record, an evidence-based tool endorsed by the College of Family Physicians of Canada and the Canadian Paediatric Society. Dr. Greig, primary author of the Greig Health Record, developed and continues to work as one of the leading facilitators of the program.

In a highly interactive agenda of enhanced learning, the program focuses on sharing your challenging cases and finding approaches that you can effectively apply in your clinic.

➤ Why attend?

In this *highly interactive* workshop:

- **Get the latest evidence-based** preventive care recommendations, resources and patient information for school-aged children and adolescents
- **Learn practical guidelines** for screening for mental health issues, substance use and addictions, and providing appropriate screening and counselling for the sexually active adolescent
- Explore real-life scenarios as you exchange ideas, share experiences, and develop practical approaches **with colleagues**
- Learn from **recognized educators** in a **supportive environment**
- The **modular format** of this workshop allows family physicians to attend one or both parts of the workshop based on their learning needs

Module 1: Putting prevention into practice for school-age children

Module 2: Implementing best evidence and practical solutions for adolescent health challenges

“The Program provided very practical information for daily practice – such as using forms that are suitable for EMRs and great resources for patients and parents. There were also many excellent opportunities to learn from and access support from colleagues to help address the unique challenges of caring for this population.”
