MSK EDUCATION

Joint Assessment Made Easy

The Need

Musculoskeletal conditions place a significant burden on treatment and care, and for patients these conditions can be debilitating. For health practitioners, who may face these patient care challenges daily, keeping on top of the most current and advanced diagnostic techniques is critical to positive patient outcomes and timely recovery.

The Impact

MSK Education: Joint Assessment Made Easy is a comprehensive program that will bring practitioners' diagnostic skills to the current state of practice, and includes hands-on assessments of the shoulder, back, hip, knee and ankle. After this single-day workshop, participants will be better prepared to:

- Gather relevant biomedical and psychosocial information from their patients
- Perform organized and efficient physical exams
- Interpret the findings of physical tests to determine the optimal management plan
- Use communications skills that help patients and their families make informed health decisions

*This **Group Learning** program has been certified by the College of Family Physicians of Canada for up to **21 Mainpro+** credits.*

The Next Step

Learn more about *MSK Education: Joint Assessment Made Easy*, including upcoming sessions as well as our convenient and cost-effective *By-Request* option that allows you to host this program in your community.

“Each participant had the opportunity for hands-on examination in addition to the great amount of assistance we got from the session providers and not to forget the lecturer’s outstanding skills to facilitate and introduce a great deal of information in such a short and organized matter.”
